Forecast for Saturday 10 Jun 2023

Weather: Dry and mostly clear overnight. A dry and sunny day and feeling quite warm and humid in the hills. Cloud will build during the evening and there is a small risk of a heavy or thundery shower developing, showers may have hail mixed in and cause some localised flooding where the ground has been very dry.

Chance of cloud-free hill tops above 700m: 90% most summits clear all day, perhaps some patchy cloud in the east at first, if showers develop cloud may thicken and lower in the evening.

Low cloud and visibility: Patchy low cloud above 600m early in the morning and later the day, cloud will mainly be above the summits later in the day but will thicken and lower in any heavy showers, these should be short lived. Visibility will be very good during the day but will become poor in heavy showers for a time.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A fresh or strong breeze on the summits will perhaps help with the warm temperatures but a risk of sunburn is high with strong UV levels. Some localised flooding possible in the evening and it may be gusty around any heavy showers.

Forecast for Sunday 11 Jun 2023

Weather: A cloudy start with the risk of a few showers for the hills, these may be thundery. Turning brighter with sunny spells through the morning and feeling very warm and humid. A few showers may develop during the afternoon, these could turn heavy with hail or thunder mixed in.

Maximum wind: Southeasterly 10mph gust 20 mph, stronger gusts likely near any heavy showers.

Chance of cloud-free hill tops above 700m: 90%, cloud may lower in heavy showers in the afternoon.

Low cloud and visibility: Patchy cloud at times around 600m may become more scattered in heavier showers shrouding the summits temporarily.

Temperature: **Valleys:** Plus 15 rising to 24 Celsius.
At 700m: Plus 11 rising to 16 Celsius.
Freezing level: Above all summits.
